

Sustainability Perspectives

Saving Seabirds: Lessons from Puffins About Sustainability

Stephen Kress, founder of the *National Audubon Society's Project Puffin*, will explain that worldwide, about one-third of all seabird species are now globally threatened because of effects of invasive predatory mammals, marine pollution, coastal development, and climate change. Against this grim background, Dr. Kress's presentation about restoration of Maine seabirds offers hope that people can bring seabirds back to some of their historic nesting places and responsibly manage essential forage fish which seabirds require. The methods used to bring puffins and terns back to Maine islands are now used worldwide and he will share a few of these exciting and hopeful restoration projects that demonstrate how individuals can make a difference locally for global biodiversity. Dr. Kress will also discuss insights about what puffins are telling us about creating sustainable oceans that benefit people and seabirds.

RESCHEDULED
FROM 10/4/21

November 1, 2021 12:30 – 1:30PM

Virtual event: **Zoom #:** 837 9110 3234 *passcode:* DN^7n!V2

All *Sustainability Perspectives* series events are free and open to the public.
The series explores the concept of 'sustainability' from a variety of viewpoints.

Wells is committed to providing access to all events; anyone needing assistance should contact Marian Brown, Center for Sustainability and the Environment, at 315-364-3304 or by email at mbrown@wells.edu, as soon as possible.
